ABOUT ME

Hey! My name is Antonio and I like to consider myself as a learning enthusiast. It was after my first two jobs as a traditional engineer when I got my first contact with software development and I truly fell in love with it. This made me change the course of my career, getting my first tech related job at SuperTech-Techologies, where I could learnt the basics of start-ups business models working as product manager. This experience, along with a very strong determination to become a software developer, allowed me to co-found Plant On Demand, the first online sales and management platform for the short food supply chain.
